**Subject:** PFAS Contact

Amy: Perfluoroalkyl Substances (PFAS) is a hot issue across the country, including R5. GenX, a newer PFAS compound that has made the news in North Carolina, could be an issue at Washington Works in West Virginia. EPA's Office of Research and Development and OSU conducted some monitoring around Washington Works for GenX and the results will be made public before the end of the year. We will be providing you with additional information as we get it. Is there someone else besides you at Ohio EPA that should get the emails?

Tom
